

## Research Technician/Labspecialist in Cell-Culture

### Who we are

At Roche, 80,000 people across 150 countries are pushing back the frontiers of healthcare. Working together, we've become one of the world's leading research-focused healthcare groups. Our success is built on innovation, curiosity and diversity, and on seeing each other's differences as an advantage. To innovate healthcare, Roche has ambitious plans to keep learning and growing – and is seeking people who have the same goals for themselves.

### The Position

GLYCART biotechnology AG, a 100% affiliate of Roche Pharmaceuticals, is active in the research and development of new potent antibody-based products for the treatment of cancer and autoimmune disease. We offer a stimulating and truly international environment. Glycart is located in Schlieren/Zurich.

To further strengthen our organization we are looking for a  
[Research Technician / Lab Specialist in Cell-Culture](#)

### Who you are

You're someone who wants to influence your own development. You're looking for a company where you have the opportunity to pursue your interests across functions and geographies, and where a job title is not considered the final definition of who you are, but the starting point.

In this position you will join a highly motivated team devoted to cell line development. You will be responsible for creating stable cell lines with a specific glycosylation profile and performing different expression analysis. Furthermore you will be actively involved in the development of new expression systems and cell culture media and process development up to the 10l scale.

For this interesting position in a dynamic environment we are looking for an experienced Research Technician with some years of professional experience in sterile techniques. Furthermore hands-on experience in the cultivation of mammalian cells as well as the creation of stable cell lines is favourable for this position. As educational background you hold a degree of an advanced technical college or as a Research Technician with several years of experience in either Biology or Chemistry – the later would be in conjunction with a supplementary education in biology. You should also be familiar with ELISA, western blotting and other molecular biology techniques. Sound oral and written English are a must and good knowledge in oral and written German are beneficial. You have a quick grasp of new techniques and a high degree of self-motivation. Furthermore you are able to work on your own and are known for your accurate but yet efficient working style. In addition you interact effectively with a truly multinational team of scientists.

If you are interested in working in an environment that is challenging and rewarding, we're interested in hearing from you!
