

Laboratory Technician Immunosafety (2 years temporary)

Who we are

At Roche, 80,000 people across 150 countries are pushing back the frontiers of healthcare. Working together, we've become one of the world's leading research-focused healthcare groups. Our success is built on innovation, curiosity and diversity, and on seeing each other's differences as an advantage. To innovate healthcare, Roche has ambitious plans to keep learning and growing – and is seeking people who have the same goals for themselves.

The headquarters in Basel is one of Roche's largest sites, over 8,000 people from approximately 80 countries work at Roche Basel. Favored by its geographic location in the heart of Europe, the Basel area is one of the most dynamic economic regions in Switzerland – a great place to live and work.

The Position

The immunosafety group in Non-Clinical Safety supports safety evaluation of novel drugs throughout preclinical development. Its tasks are to identify and characterize the potential undesirable effects of drugs in various study types.

As a laboratory technician in Immunosafety of our Early and Investigative Safety department at our Basel site you will be responsible for the following tasks:

- Perform in vitro assays within BL2 laboratory environment to assess the potential of novel biotherapeutics to cause immunogenicity
- Assay development and writing of SOPs
- Analysis and documentation of experimental work

Who you are

You're someone who wants to influence your own development. You're looking for a company where you have the opportunity to pursue your interests across functions and geographies, and where a job title is not considered the final definition of who you are, but the starting point.

You enjoy working in a multidisciplinary, international, and highly interactive environment. To be successful in this role you bring the following qualifications:

- Completed education as biology Laboratory technician or a higher degree of education
- Experience in in vitro cell culture
- Experience in immunological techniques e.g. FACS, purification of cell subsets
- Good organisational skills
- Ability to work independently
- Good team player
- Excellent English skills
