

Job Advertisement Nr. 48/2010

In the Immune Aging and Chronic Infections group is a

Postdoctoral position

available to work on the effects of persistent herpesvirus infections on the immune system with a special focus on the homeostasis of T-cell subsets.

Prerequisites:

Candidates are required to hold a PhD in life sciences, an MD or a VMD degree at the time of their employment, an excellent publication record and be dedicated to experimental immunological work, including in vivo models. Strongly motivated candidates with experience in virology or cellular immunology and/or with a track record in successful application for independent funding will be given special consideration.

The institute offers excellent working conditions with state of the art technical facilities, a lively scientific community and excellent support for the development of personal soft-skills.

Women are especially invited to apply.

Severely disabled applicants will be favoured if they are equally qualified.

Starting date: Available from October 1st 2010
- The contract will be for two years with the possibility of extension -

Salary: TVöD E13 + bonus to E14

Closing date: 01.09.2010

Applications should refer to code **48/2010** and be sent to:
Helmholtz Centre for Infection Research
Dept. of Human Resources
Inhoffenstr. 7,
38124 Braunschweig, Germany.
